

# STORE UNIT

**Our Store Unit is a highly flexible, narrow-wheeled unit which enables faster replenishment in stores.**

## STORE UNIT – LOGISTICS CONCEPT OUTLINE

Most retailers are facing a similar problem after replenishing the store shelves: what to do with the remaining goods on pallets or on roll cages in small storage rooms. One of the options is to consolidate products on pallets, roll cages or to place them on storage shelves. Another option is to use our flexible wheeled Store Unit – a movable rack - which enables fast store-shelf replenishment. In addition, store units provide excellent visual management of well-organized products due to various shelves and different dividers.

## STORE UNIT – PROMOTIONAL CONCEPT OUTLINE

Many retailers search for the best way to sell out seasonal goods or stock close to the expiration date. Our Store unit, equipped with promotional sale ads, EAN or price tag holders, is an ideal on-wheels solution to crate selling islands, or simply to push the Store Units close to the cash registry as impulsive-items shopping.

## TECHNICAL DATA/SPECIFICATIONS

Design:	Ergonomic, efficient, improved safety, large volume/sq.m, smart folding handle saves space, flexible shelves
